RedTeam AI CTF: Rules

AI CTF does not mean AI-assisted solving. The competition is AI-themed, but participants may not use any AI to solve challenges.

1. Teams

- Teams of up to 3 members. No solo participation.
- Each person may join only one team and must register through the official platform.
- Each participant uses only their own registered account. Multiple or proxy accounts are prohibited.

2. AI Usage: Strictly Prohibited

No ChatGPT, Gemini, Claude, Copilot, local LLMs, AI agents, AI-powered security tools, or any other AI system may be used for hints, analysis, solutions, or exploit code.

3. Fair Play

- Solve challenges yourselves, within each challenge's intended scope.
- Collaborate only within your own team.
- Do not share flags, hints, solutions, payloads, credentials, files, or write-ups with other teams while challenges are active.
- Submit only flags your team obtained, and only through the official platform.

4. Tools & Infrastructure

- Standard cybersecurity tools are allowed unless a challenge says otherwise.
- Attack only the challenge infrastructure provided. The CTF platform, scoring and leaderboard, authentication, academy systems, other teams, and external systems are off-limits unless a challenge explicitly includes them.
- No resource-heavy automation, damaging or disrupting challenges, or interfering with services other teams need.
- If you find access beyond a challenge's intended scope, report it rather than exploiting it.

5. Proof of Concept (PoC)

- Keep evidence for every solve: screenshots, screen recordings, and the commands, payloads, or steps you used.
- Organizers may request PoC during or after the event. Preserve it until verification officially closes.
- Submissions without a credible PoC may be invalidated.

6. Monitoring & Verification

Organizers and authorized volunteers may monitor activity and, where suspicious activity is observed, review your competition environment. This includes running applications, terminal, browser, and network activity related to the competition. Refusing a legitimate verification request may lead to disqualification.

7. Scoring

- Scores are calculated by the platform. The leaderboard is not final until organizers close the competition.
- Prizes require team verification, solution verification, rule compliance, and confirmed participant details.

8. Disqualification

Any rule violation can result in removed scores, loss of leaderboard position and prize eligibility, or disqualification. This includes AI use, flag sharing, cross-team collaboration, multiple accounts, attacking unauthorized targets, manipulating scores, disrupting infrastructure, providing false information, or refusing verification.

9. Conduct

Harassment, threats, abuse, impersonation, and interfering with other teams are prohibited.

10. Final Decision

Organizers' decisions on rule violations, flag validity, PoC verification, disqualification, and prizes are final.

GENERAL RULES

1.Every team must report at least 30 minutes before the challenge starts, i.e., by 9:30 AM.

2. Bring Your Own Connectivity 📶
A personal mobile hotspot is mandatory for every participant. Due to high concurrent usage, venue bandwidth cannot be guaranteed, so your own hotspot will be your primary internet connection for the entire CTF
